SureFire Safety statements

First Class Safety Solutions, guaranteed.

Our aim is to provide top quality customer service with the most competitive prices without compromising quality.

Test it Tuesday - SureFire Safety recommends testing your fire alarm system every Tuesday to ensure it is functioning correctly

Did you know / Case study

The fire service attended 246 fires started in a kitchen and 127 fires starting because of electrical equipment in 2020

Do you have the correct fire blanket and extinguishers in your kitchen ?

Have you got the correct extinguisher close to your fuse boards?

The fire service attended 5805 false alarms - don't let your premises be one of these statistics and have one of our technicians ensure your fire alarm system is in healthy working order

Services

Fire Alarm systems

We provide a fully tailored service to our customers from Design, Supply, Installation & Commissioning. All to comply with the relevant IS3218 Irish Fire Alarm standards.

We also offer a comprehensive fire alarm maintenance service to ensure your system is kept fully functional at all times.

Our engineers have vast experience on all wired & wireless fire detection systems

Fire suppression systems

Fire Suppression Systems are used to extinguish, control, or in some cases, entirely prevent fires from spreading or occurring. Fire Suppression Systems have an incredibly large variety of applications, and as such, there are many different types of suppression systems for different applications being used today. Our team can Design, Supply, Install, Commission & Maintain these systems.

Emergency lighting

The main function of an Emergency Lighting System is to ensure that in the event of a power failure or lighting circuit failure, the people in the building will be able to clearly and easily identify their closest exit and safely find their way out of the building, thus ensuring that the risk of injury or loss of life is greatly reduced. Our team can ensure that your Emergency Lighting system is Designed, Installed and Maintained to the highest safety standards as set out in Irish emergency lighting standard **IS3217**.

Fire extinguishers

There are numerous types and sizes of fire extinguishers, we carry a full range of all types - Water, Foam, Co2, Powder, Wet Chemical and fixed point automatic extinguishers.

Call today for a free site survey so we can best advise you what type and quantity will best suit your premises.

All of our work is carried out to **IS 291** Irish Fire Extinguisher Standards.

Disabled Refuge systems

Disabled refuge outstations are one part of an 'Emergency Voice Communication' (EVC) system and are typically mounted in 'disabled refuge areas'.

All disabled refuge units are designed to provide two-way HANDS FREE communication between the occupier of a disabled refuge area and the person (or persons) operating the 'EVC control panel'. They are designed for use in an emergency when the evacuation of a building is required – such as during a fire.

Any person requiring assistance for the evacuation will await help in the designated refuge areas.

People that might use this facility include the physically impaired, wheelchair users, pregnant ladies, or indeed anyone that requires assistance in exiting a building or area to safety.

Using the disabled refuge unit, the person waiting for assistance is able to speak directly with personnel in control of the evacuation. This can provide reassurance, keep the person updated with the situation and confirm that help is on its way.

Our team can Design, Supply, Install, Commission & Maintain these systems for all building types and sizes.

24/7 Monitoring

Whether its a new or existing fire alarm system enhancing your system to include monitoring will reduce the risk of losing your business to fire.

When your fire alarm is activated – day or night – a signal is sent to our alarm receiving centre and always responded to 24/7, 365 days a year.

About us

SureFire Safety are now recognised as one of the leading fire safety providers to the Fire Industry in Ireland, providing an unrivalled service to our customers.

With a 24/7 back up and full technical support, provided from our offices in Co.Kildare. We assist customers right through from the initial design stage to final commissioning & maintenance of their Fire Alarm System/Fire suppression system/emergency lighting & Fire extinguishers

Museum's

Public sectors

Councils

Fire Brigades

Other local authority's

Health sector

Care homes

Sheltered Accommodation

Hospitals

Education sector

Primary & Secondary Schools

University's

FAQ

1 Q.How often should my fire alarm system be serviced?

A. If your premises has more then 20 devices, or is a place of residence, then the fire alarm system should be serviced 4 times a year. In cases where there are less than 20 devices; servicing should be carried out twice per year.

2 Q.If my fire alarm system has a fault what should I do?

A. As a Surefire Safety customer; you can call us on our 24/7 service line number to report the fault. Initial investigation will then commence over the phone and a decision will be made on whether you need a visit from our Engineer or whether the fault can be rectified over the phone.

3 Q.How much does it cost for my fire alarm system to be serviced?

A. As all buildings are different, and fire alarms vary, the only way to give you an accurate quotation is for you to contact us and arrange a site survey. Please see the Contact Us section of this site and fill in the necessary fields.

4 Q. The tamper seal has been damaged on my fire extinguisher, what should I do?

A. As one of our customers; If you come across a fire extinguisher that has a missing/damaged tamper seal, please contact us straight away to arrange for the appliance to be checked. Depending on our findings we will either reseal or replace the extinguisher.

5 Q. How often should my emergency lights be inspected ?

Emergency lights need 4 tests per year: three 30 minute inspections and one 3 hour inspection. If you are a SureFire Safety Customer we can carry out these tests at the same time as your quarterly Fire Alarm Systems checks.
